**Amendments to the specification:**

Following the section entitled "Abstract of the Disclosure" and before the Figures, please insert the paper copy of the "Sequence Listing", attached hereto as **Exhibit B**.

In addition, please amend the specification as follows:

On page 13, lines 1-14, please delete the paragraph which begins on line 1 and insert the following paragraph:

added and the complete reaction mixture was incubated for 45 min at 30°C in a final volume of 25  $\mu$ l. The reaction was terminated by adding 175  $\mu$ l of stop mix (0.1 M sodium acetate (pH 5.2), 10 mM EDTA, 0.1% SDS, 200  $\mu$ l/ml tRNA) followed by phenol extraction and ethanol precipitation. RNA was resuspended in sample buffer containing 80% formamide and 10 mM Tris-HCL (pH 7.4) and separated on 5% polyacrylamide gel containing 7 M urea in TBE. Correctly initiated transcripts were quantitated by PhosphorImager analysis. The test DNA template was constructed by inserting into pC<sub>2</sub>AT19 plasmid a PCR-amplified oligonucleotide prepared by using the (C3P)<sub>3</sub>-TK-CAT plasmid as template and consisting of three copies of the C3P element of the Apo CIII promoter sequence (-87/-66) having an EcoRI and SSTI sites at the 5' and 3' ends, respectively. The resultant plasmid was cleaved with sphi and sacI and ligated to a synthetic oligonucleotide (5'-CGAGGTCCACTTCGCTATATATTCCCCGAGCT-3') (SEQ ID NO:1) containing sequences of the HSV thymidine kinase promoter

(-41/-29) and of the chicken ovalbumin promoter (-33/-21).

On page 13, lines 17-27, please delete the paragraph which begins on line 17 and insert the following paragraph:

COS-7 cells cotransfected for 6h with the (C3P)<sub>3</sub>-TK-CAT reporter plasmid (5  $\mu$ g) and with either pSG5-HNF-4 $\alpha$  expression plasmid (0.025  $\mu$ g) or the pSG5 plasmid (0.025  $\mu$ g) added by calcium phosphate precipitation were cultured in serum free medium with fatty acids (complexed with albumin in a molar ration of 6:1) added as indicated. B-Galactosidase expression vector pRSGAL (1  $\mu$ g) added to each precipitate served as an internal control for transfection. The (C3P)<sub>3</sub>-TK-CAT construct by prepared by inserting a synthetic oligonucleotide encompassing the (-87/-66) Apo CIII promoter sequence (5'-GCAGGTGACCTTGCCCCAGCGCC-3') (SEQ ID NO:2) flanked by HindIII restriction site into pBLCAT2<sup>47</sup> upstream of the -105 bp thymidine kinase promoter. The construct containing three copies of the synthetic oligonucleotide in the direct orientation was selected and confirmed by sequencing.
